

Milestone 5 Documentation

Name : Rinashini A/P Arunasalam Sukormaru
Matric ID : WQD170077 (17013672/1)
Github Link : <https://github.com/RinashiniA/WQD7005-Group>

Part A: Installing Kivy and its packages

- 1) Installing Kivy using pip install kivy as guided in the kivy website.

```
Rinashinis-MacBook-Pro:~ rinashiniarunasalam$ python -m pip install kivy
Collecting kivy
  Downloading Kivy-1.11.1-cp37-cp37m-macosx_10_6_intel.macosx_10_9_intel.macosx_10_9_x86_64.macosx_10_10_intel.macosx_10_10_x86_64.whl (6.9 MB)
    |████████████████████████████████████████| 6.9 MB 4.1 MB/s
Requirement already satisfied: pygments in /opt/anaconda3/lib/python3.7/site-packages (from kivy) (2.5.2)
Requirement already satisfied: docutils in /opt/anaconda3/lib/python3.7/site-packages (from kivy) (0.16)
Collecting Kivy-Garden>=0.1.4
  Downloading kivy-garden-0.1.4.tar.gz (6.8 kB)
Requirement already satisfied: requests in /opt/anaconda3/lib/python3.7/site-packages (from Kivy-Garden>=0.1.4->kivy) (2.22.0)
Requirement already satisfied: chardet<3.1.0,>=3.0.2 in /opt/anaconda3/lib/python3.7/site-packages (from requests->Kivy-Garden>=0.1.4->kivy) (3.0.4)
Requirement already satisfied: certifi>=2017.4.17 in /opt/anaconda3/lib/python3.7/site-packages (from requests->Kivy-Garden>=0.1.4->kivy) (2019.11.28)
Requirement already satisfied: urllib3!=1.25.0,!1.25.1,<1.26,>=1.21.1 in /opt/anaconda3/lib/python3.7/site-packages (from requests->Kivy-Garden>=0.1.4->kivy) (1.25.8)
Requirement already satisfied: idna<2.9,>=2.5 in /opt/anaconda3/lib/python3.7/site-packages (from requests->Kivy-Garden>=0.1.4->kivy) (2.8)
Building wheels for collected packages: Kivy-Garden
  Building wheel for Kivy-Garden (setup.py) ... done
  Created wheel for Kivy-Garden: filename=Kivy_Garden-0.1.4-py3-none-any.whl size=4531 sha256=d5285c8ae9d7948cc76bf8a59532cc02bd8a0d3077909bbcf76a1545b2457fc
  Stored in directory: /Users/rinashiniarunasalam/Library/Caches/pip/wheels/3f/43/e3/50289d555356f0421d1c388c82d052d5788f22a34d0cd8659d
Successfully built Kivy-Garden
Installing collected packages: Kivy-Garden, kivy
Successfully installed Kivy-Garden-0.1.4 kivy-1.11.1
```

- 2) Installing pygame which is a Python wrapper module for the SDL multimedia library that contains python functions and classes that allow for keyboard and mouse inputs.

```
Rinashinis-MacBook-Pro:~ rinashiniarunasalam$ python -m pip install pygame
Collecting pygame
  Downloading pygame-1.9.6-cp37-cp37m-macosx_10_11_intel.whl (4.9 MB)
    |████████████████████████████████████████| 4.9 MB 2.6 MB/s
Installing collected packages: pygame
Successfully installed pygame-1.9.6
```

- 3) Upgrading pip wheel setuptools to ensure that we have the latest pip and wheel.

```
Rinashinis-MacBook-Pro:~ rinashiniarunasalam$ python -m pip install --upgrade pip wheel setuptools
Collecting pip
  Downloading pip-20.1.1-py2.py3-none-any.whl (1.5 MB)
    | 1.5 MB 1.2 MB/s
Requirement already up-to-date: wheel in /opt/anaconda3/lib/python3.7/site-packages (0.34.2)
Collecting setuptools
  Downloading setuptools-47.3.1-py3-none-any.whl (582 kB)
    | 582 kB 577 kB/s
Installing collected packages: pip, setuptools
  Attempting uninstall: pip
    Found existing installation: pip 20.0.2
    Uninstalling pip-20.0.2:
      Successfully uninstalled pip-20.0.2
  Attempting uninstall: setuptools
    Found existing installation: setuptools 46.0.0.post20200309
    Uninstalling setuptools-46.0.0.post20200309:
      Successfully uninstalled setuptools-46.0.0.post20200309
Successfully installed pip-20.1.1 setuptools-47.3.1
```

- 4) Installing graph from the garden package which will be used when computing and displaying of graphs.

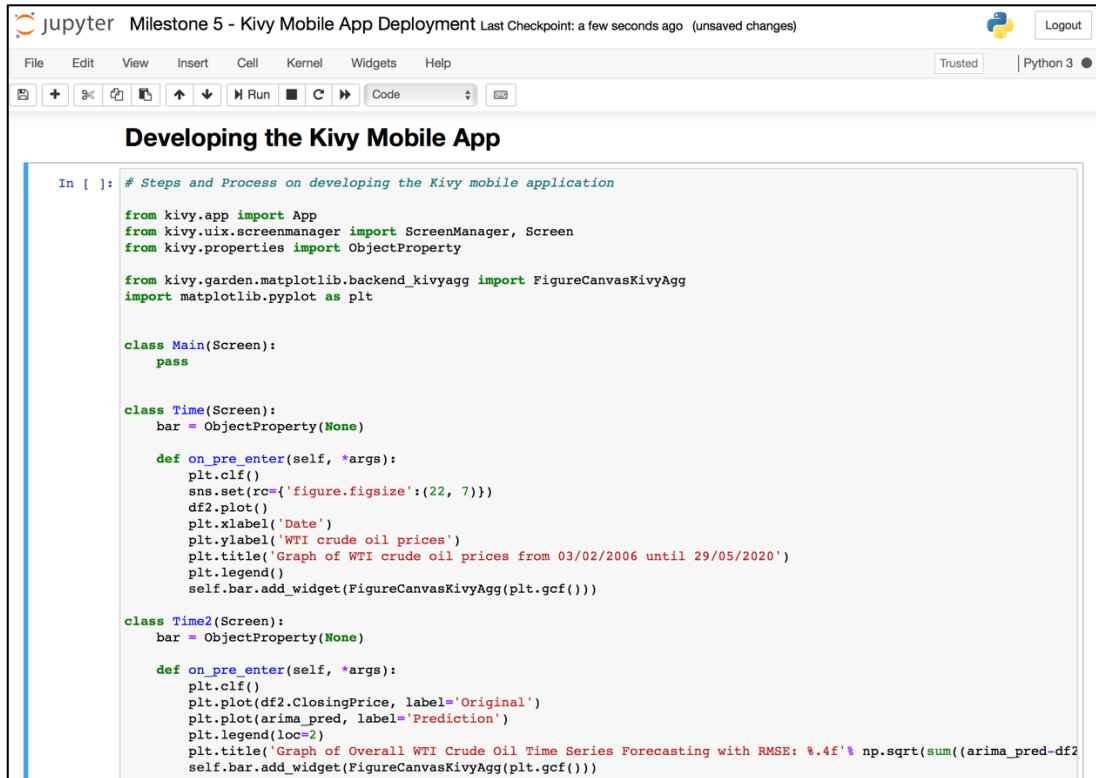

```
(base) Rinashinis-MacBook-Pro:~ rinashiniarunasalam$ garden install graph

Done! garden.matplotlib is installed at: /Users/rinashiniarunasalam/.kivy/garden/garden.matplotlib
Cleaning...
(base) Rinashinis-MacBook-Pro:~ rinashiniarunasalam$
```

Part B: Kivy App Jupyter Notebook and .kv file (as zipped)

- 1) Jupyter Notebook on codes to develop the Kivy Mobile App. The entire ipynb is as zipped.

The screenshot shows a Jupyter Notebook window titled "Milestone 5 - Kivy Mobile App Deployment". The interface includes a top bar with the Jupyter logo, the title, and a "Logout" button. Below the top bar is a menu bar with options: File, Edit, View, Insert, Cell, Kernel, Widgets, and Help. A toolbar with various icons for cell manipulation and execution is also present. The main area displays a code cell with the following Python code:

```
In [ ]: # Steps and Process on developing the Kivy mobile application

from kivy.app import App
from kivy.uix.screenmanager import ScreenManager, Screen
from kivy.properties import ObjectProperty

from kivy.garden.matplotlib.backend_kivyagg import FigureCanvasKivyAgg
import matplotlib.pyplot as plt

class Main(Screen):
    pass

class Time(Screen):
    bar = ObjectProperty(None)

    def on_pre_enter(self, *args):
        plt.clf()
        sns.set(rc={'figure.figsize':(22, 7)})
        df2.plot()
        plt.xlabel('Date')
        plt.ylabel('WTI crude oil prices')
        plt.title('Graph of WTI crude oil prices from 03/02/2006 until 29/05/2020')
        plt.legend()
        self.bar.add_widget(FigureCanvasKivyAgg(plt.gcf()))

class Time2(Screen):
    bar = ObjectProperty(None)

    def on_pre_enter(self, *args):
        plt.clf()
        plt.plot(df2.ClosingPrice, label='Original')
        plt.plot(arima_pred, label='Prediction')
        plt.legend(loc=2)
        plt.title('Graph of Overall WTI Crude Oil Time Series Forecasting with RMSE: %.4f'% np.sqrt(sum((arima_pred-df2
        self.bar.add_widget(FigureCanvasKivyAgg(plt.gcf()))
```

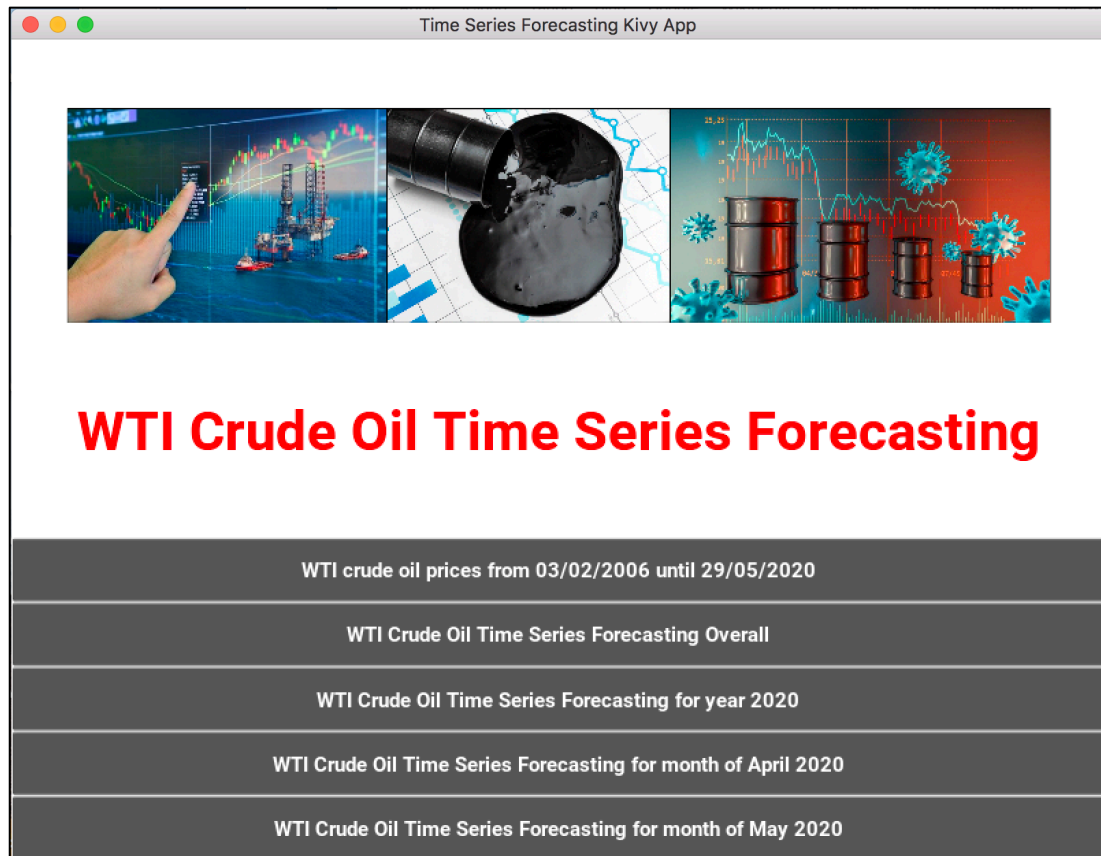

- 2) The .kv file that helped to create the interface of the Kivy Mobile App.
The entire .kv file is as zipped.

```

Part C: Kivy App Deployment Result

- 1) Main page (slide) which contains the buttons that will link to the graphs of WTI Crude Oil Prices over the years as well as the WTI Crude Oil Time Series forecasting models when clicked.

- 2) The first button (when clicked) will move to the next page (slide) that displays the graph of WTI Crude Oil closing prices from the year 2006 until May 2020.

- 3) To move over to the second button from the main page, the “Go to Main Menu” button has to be clicked. It will then take us to the main screen to which the second button that will display the overall WTI Time Series Forecasting can be clicked.

This graph shows the Overall WTI Crude Oil Time Series Forecasting Model for 669 observations where it has a Mean Absolute Percentage Error (MAPE) of 0.0289 which gives the model an accuracy level of 97.11%.

- 4) After clicking on to the “Go to Main Menu” button, next we will look at the WTI Crude Oil Forecasting Model for the year 2020 where we will predict the closing prices for the year 2020.

This graph shows the WTI Crude Oil Time Series Forecasting Model for the year 2020 with 103 observations where it has a Mean Absolute Percentage Error (MAPE) of 0.1094 which gives the model an accuracy level of 89.06%.

- 5) Looking further into the WTI Crude Oil Time Series Forecasting Model, in the next button when clicked will display the graph of WTI Crude Oil Forecasting Model for the month of April 2020.

This graph shows the WTI Crude Oil Time Series Forecasting Model for the month of April 2020 with 21 observations where it has a Mean Absolute Percentage Error (MAPE) of 0.3812 which gives the model an accuracy level of 61.88%.

A lower accuracy in forecasting was observed with 61.88% as compared to the accuracy level of the overall prediction model with 97.11% due to the sudden sharp collapse in oil demand in mid-April 2020 leaving the global market oversupplied with more than enough crude oil. The lack of oil demand is due to most countries experiencing lockdowns to overcome the Covid-19 outbreak. This then caused the price of the WTI crude oil to drop to levels of negative as shown in the plot as above.

At such, it was difficult to correctly predict the closing price of the WTI Crude Oil due to unforeseen circumstances. While if there isn't sudden external factors affecting the WTI Crude Oil price, the forecasting would've been easier and will have a higher accuracy level.

- 6) And the last button when clicked will display the WTI Crude Oil Forecasting Model for the month of May 2020 with 21 observations where it has a Mean Absolute Percentage Error (MAPE) of 0.0464 which gives the model an accuracy level of 95.36%.

While in the month of May 2020, we can observe a more stable increase in the price of WTI crude oil per barrel as countries are moving from tighter lockdowns to looser lockdowns due to most countries having reduced rise in the number of daily Covid-19 cases. Hence, the prediction of WTI crude oil price for the month of May 2020 is more stable with 95.36% accuracy as there isn't sudden external parameters impacting the price of WTI crude oil severely.
